Podman-machine update June 2021

- **What we have in development**
  - Working custom images for x86_64 Linux & MacOS and aarch64 Linux & aarch MacOS
  - Port forwarding on host
  - Some buggy code that needs testing
- **Remaining obstacles**
  - Merge development code
  - Packaging for both Linux and Brew
  - aarch64 support for FCOS is pending (will lead with x86_64)
  - Upstream merge of qemu support for M1
- **Looking forward**
  - Need a reasonably performant solution for mounting from host
  - Work with FCOS team to reduce size of base image
